// who i am

Product engineer who builds with AI - not just around it.

I'm a product manager and front-end engineer who spends most of every working day building with foundation models: integrating LLMs into products, prototyping features, generating and analysing assets, and using AI as a coding partner to ship real, deployed software. I grew from **front-end engineer** → **product owner** → **product manager** on the same platform, and I still write and ship code. What I bring to an AI role is an uncommon blend - I can **shape an AI feature as a product, build a working version of it myself**, and reason honestly about where models add real value versus where they're hype. I'm targeting AI engineering and AI product roles because that's already where my curiosity, my side projects, and most of my day go.

// where i've shipped

Product Manager

Mar 2025 - Present

Foco Criativo / Movize · mobility ecosystem · Braga, PT

- Own the roadmap end-to-end for the **Movize** ecosystem - the passenger app, the **Movize Connect** operator portal (GTFS editor, street furniture & sensors, events, Operators), the operators app, the movize web app and the movize website.
- Lead the call on **where AI genuinely improves the product**: prototype AI-assisted flows, run discovery, and pressure-test where foundation models add real value versus where they're a distraction.
- Use **AI daily as a build multiplier** - generating specs, wireframes, front-end code and product assets - while keeping design, engineering and operations aligned in Scrum / Kanban.

Product Owner

Jul 2024 - Feb 2025

Foco Criativo / Movize · Braga, PT

- Refined **epics and user stories** across Movize modules into clear, testable work; ran Scrum ceremonies; owned quality against acceptance criteria and UAT.
- Brought **AI tooling into refinement and documentation** to speed up delivery and keep specs tight.

Software Engineer · Front-End

Nov 2023 - Jun 2024 · still ships

Foco Criativo / Movize · Braga, PT

- Build and maintain **front-end features** across the Movize portal and web app (JavaScript / ES Modules, HTML / CSS, Vue & React). Still shipping code today - which lets me prototype AI features myself and write specs engineers can actually build.

Astro Hop

// platformer + a study in AI-assisted engineering

play

A complete, deployed Phaser 3 / Vite platformer - arcade physics, a SMALL→BIG→FIRE power-up state machine, stompable enemies, data-driven plain-text level grids, multi-touch mobile controls, and a full game-flow loop. Every sound effect and music track is synthesised live with the Web Audio API - zero audio files. **Built deliberately as a structured exploration of using a frontier LLM as a coding partner** - pushing it across architecture decisions, multimodal spritesheet analysis, and asset generation, and mapping where it excels versus where it needs steering. Ships to GitHub Pages via GitHub Actions on every push.

Nibble

// Nokia Snake, reborn as an installable PWA

play

A from-scratch TypeScript remake built on a **five-layer decoupled architecture** - a deterministic, fully unit-tested engine with zero DOM, data-driven themes, skins and levels, an in-game economy, and a local-first leaderboard with an optional Supabase-backed global board. Installable and fully playable offline as a PWA. **Built with Claude as a documented coding partner** - conventions and architectural invariants captured in a `CLAUDE.md` that keeps game rules out of the renderer.

Claude Code Skills

// installable agent tooling - 3 shipped

Custom **skills and plugins that extend Claude Code** - slash commands, a plugin marketplace, and deterministic Markdown / PDF workflows - built to run real product work directly from an agentic coding environment.

Idea-Ledger

skill

repo

A friction-free PM system in two plain-Markdown files - capture ideas, track how each evolves, and version what ships. Append-only by design (nothing is deleted), zero dependencies, stack-agnostic.

Claude Code skill

Markdown

slash commands

Agile-Ledger

plugin

repo

The full Scrum lifecycle - ideas → backlog → sprint → release, plus bug tracking - as plain Markdown living next to the code, joined to GitHub by user-story ID across every branch, commit and PR. 31+ slash commands, no database.

Claude Code plugin

Markdown

slash commands

Git / GitHub

Cartographer

skill + plugin

repo

Scans a project's repositories and writes audience-aware stakeholder documentation - Markdown plus a polished PDF - describing what each product does and how it fits. Read-only, source-tracked, and shipped as its own plugin marketplace.
