https:// 01 - Profile // who i am

Product engineer who builds with AI - not just around it.

I'm a product manager and front-end engineer who spends most of every working day building with foundation models: integrating LLMs into products, prototyping features, generating and analysing assets, and using AI as a coding partner to ship real, deployed software. I grew from **front-end engineer → product owner → product manager** on the same platform, and I still write and ship code. What I bring to an AI role is an uncommon blend - I can **shape an AI feature as a product, build a working version of it myself**, and reason honestly about where models add real value versus where they're hype. I'm targeting AI engineering and AI product roles because that's already where my curiosity, my side projects, and most of my day go.

Product Manager

Mar 2025 - Present

Foco Criativo / Movize · mobility ecosystem · Braga, PT

- Own the roadmap end-to-end for the **Movize** ecosystem - the passenger app, the Movize Connect operator portal (GTFS editor, street furniture & sensors, events, Operators), the operators app, the movize web app and the movize website.
- Lead the call on **where AI genuinely improves the product**: prototype AI-assisted flows, run discovery, and pressure-test where foundation models add real value versus where they're a distraction.
- Use **AI daily as a build multiplier** - generating specs, wireframes, front-end code and product assets - while keeping design, engineering and operations aligned in Scrum / Kanban.

Product Owner

Jul 2024 - Feb 2025

Foco Criativo / Movize · Braga, PT

- Refined **epics and user stories** across Movize modules into clear, testable work; ran Scrum ceremonies; owned quality against acceptance criteria and UAT.
- Brought AI tooling into refinement and documentation to speed up delivery and keep specs tight.

Software Engineer · Front-End

Nov 2023 - Jun 2024 · still ships

Foco Criativo / Movize · Braga, PT

- Build and maintain **front-end features** across the Movize portal and web app (JavaScript / ES Modules, HTML / CSS, Vue & React). Still shipping code today - which lets me prototype AI features myself and write specs engineers can actually build.

Claude Code Skills // installable agent tooling - 3 shipped

Custom **skills and plugins that extend Claude Code** - slash commands, a plugin marketplace, and deterministic Markdown / PDF workflows - built to run real product work directly from an agentic coding environment.

Idea-Ledger `skill`

repo ↗

A friction-free PM system in two plain-Markdown files - capture ideas, track how each evolves, and version what ships. Append-only by design (nothing is deleted), zero dependencies, stack-agnostic.

`Claude Code skill` `Markdown` `slash commands`

Agile-Ledger `plugin`

repo ↗

The full Scrum lifecycle - ideas → backlog → sprint → release, plus bug tracking - as plain Markdown living next to the code, joined to GitHub by user-story ID across every branch, commit and PR. 31+ slash commands, no database.

`Claude Code plugin` `Markdown` `slash commands` `Git / GitHub`

Cartographer `skill + plugin`

repo ↗

Scans a project's repositories and writes audience-aware stakeholder documentation - Markdown plus a polished PDF - describing what each product does and how it fits. Read-only, source-tracked, and shipped as its own plugin marketplace.

`Claude Code skill + plugin` `Python` `WeasyPrint · PDF` `Markdown`

Beagle Chomp // a maze-chase game where every pixel is drawn in code

play ↗

A maze-chase arcade game built from scratch in TypeScript and three.js where **every mesh, texture and sound is generated at runtime from code** - no 3D models, no texture files, no audio files. The game logic is pure TypeScript that may never import three.js, which makes a **headless test suite** possible: a pathfinding bot has to clear all 36 mazes to 100% before the suite passes. Ships with a built-in 3D editor that writes changes back into source, a 40-level campaign, a server-validated leaderboard, and installs as a PWA. **Built with Claude Code as the implementation partner**, driven from written specs and a roster of specialist subagents.

`TypeScript` `three.js` `WebGL / WebGPU` `Web Audio API` `Vite` `PWA` `Playwright` `Claude Code subagents`

https:// 05 - Credentials // certified

AI — IBM · PROFESSIONAL CERTIFICATE
AI Product Manager — 10 COURSES 2026
Building AI-Powered Products · Foundation Models & Platforms · Prompt Engineering · hands-on with ChatGPT & DALL·E.

PO — IBM · PROFESSIONAL CERTIFICATE
Product Owner — 6 COURSES 2025
Scrum roles & events · product vision, backlog & user stories · stakeholder management · release planning · PSPO I prep.

UX — MICROSOFT · PROFESSIONAL CERTIFICATE
UX Design — 4 COURSES 2026
User research · information architecture · wireframing & prototyping · visual design & accessibility · leveraging AI in UX.

ALSO **Meta Front-End Development** (5 courses) · **HTML, CSS & JavaScript for Web Developers** (Johns Hopkins) · **MaaS: Adoption & Use** (TU Eindhoven) · **Introduction to Jira** (Atlassian)
